

Three questions to the company's management:

What kinds of services do you offer and who are the clients they principally apply to?

Our typical clients are medium-sized companies from all kinds of industries, needing to exchange a massive amount of data with other companies. As a provider of IT services in the e-business segment we synchronize the interfaces of the clients' ERP systems and their corresponding e-business systems.

Why could this not be done by the IT department of the respective company?

In general, the IT-departments of most companys have so much to do with day-to-day operations that it absolutely makes sense to bring us in as experts for a specific e-business project, thus guaranteeing a perfect rollout process with regard to costs, time and quality. Furthermore, to handle a project like this, you need very special know-how and years of working experience in the e-business sector.

Why should a potential client choose the e-Manager GmbH?

Outstanding cost effectiveness, commitment to service and our competence in project managment make us the ideal partner for medium-sized companies. We know just about everything there is to know about ERP- and e-business- systems.
